

Games in SmartCape Libraries

1. 90 Second Portraits - In this game players have to paint a portrait in 90 seconds to make money and pay their bills. It challenges the players creative abilities while also testing their financial intelligence. Making it quite suited for a South African audience. The game has in in-game tutorial, works in 32 bit computer, users can play using the numbers 1 to 7 on the keyboard <https://tangramgames.itch.io/90-second-portraits>
2. Supernode - Create and combine nodes to produce the right amount of energy from the flowing particles. CONTROLS: mouse - drag to create a node, click to remove. Rhombus nodes are “factory” sources that produce the energy bits. Large circle nodes are outlets. They are destinations, consumers, sinks. The game ends when one of them starves of power. Smaller circle nodes combine energy from multiple sources. They can be removed by clicking. Players have to strategically make the <https://questionevolution.itch.io/the-question-evolution-day-game>
3. Sort the Court - This is game is about a King/Queen who rules the kingdom using only yes or no commands, it takes the user through some difficult choices about what is good for the court vs what is good for them personally. The game runs on a linux machines and players only need to use the mouse to click yes or no. <https://graebor.itch.io/sort-the-court>
4. Mr Blue -The city is running out of power due to its sad and cranky citizens. Mr. Blue is here to empower the city with his go to attitude and hip moves.

- How to Play -

Use the corresponding hip gesture and make the civilians happy thus providing power the city. Any civilian who crosses the bridge sad/mad will cause the city power (represented by the red bar at the top) to deplete faster.
